

stlview

STL file viewer

	Data format name	File extension
Input data	stl binary/ascii	any

Init file(optional)

~/stlview , ./stlview(priority)

CENTER: 0 0 232 (x y z for the initial display)
 BACK: 10 (0~10 integer)
 ROT: -0.5 0.5 -0.5 -0.5 (rotation params for the initial display)
 SIZE: 800 800 (horizontal vertical pixels for the window)
 RADIUS: 80 (radius of the circles)
 AXIS: 2 (axis flag)
 LFLAG: 5 (light flag 0~9)
 LIGHT0: 1 1 -1 0 (setting for the light 0)
 LIGHT1: 1 -1 -1 0 (setting for the light 1)
 LIGHT2: 1 -1 1 0 (setting for the light 2)
 LIGHT3: 1 1 1 0 (setting for the light 3)
 LIGHTCOLOR: 1 1 1 1 (setting for the light color)
 SCOLOR: 0.8 0.5 0.5 1 (setting for the default surface color)
 MAXIS: 1 0 0 (rotation axis setting for movie , [0,1,1] for the default)
 M_AMBIENT: 0.6 0.3 0.3 1 (material color for ambient, 0~1)
 M_DIFFUSE: 1 1 1 1 (material color for diffuse, 0~1)
 M_SPECULAR: 1 1 1 1 (material color for specular, 0~1)
 M_SHININESS: 40 (material shininess, 0~128)

Key control

Keys	Modifier	Function
w		wireframe
h		surface+triangle frame
f		surface
s		3 color triangle
p		point
t	(shift,option)*	rotation along the horizontal axis
l	(shift,option)*	rotation along the horizontal axis
→	(shift,option)*	rotation along the vertical axis
←	(shift,option)*	rotation along the vertical axis
HOME		rotation along the depth axis
END		rotation along the depth axis
-		shift along the depth axis(Far)
+		shift along the depth axis(Near)
a		toggle the axis and the frame display
m		keep the position as milestone
M		display milestone points(from view3d)
r		retrieve the milestone position
R		retrieve the milestone position (depth setting is kept)
<space>		movie start/stop
>		speed-up the movie
<		speed-down the movie
d		back to the default position
D		back to the default position(depth setting is kept)
v		perspective/orthogonal view change
A		change the alpha value(0~10)
i		display the info in the terminal
I		information display on/off
l		light on/off
1~9		visualization flags for the multi color object
1~9	shift	illumination flags (1,3,7,9 corresponds to each light source)

t		toggle the display on/off for the target colored object
T		toggle the display on/off for the whole object
S		shiny surface on/off
V		set the vertex normal vectors(toggle GL_FLAT/GL_SMOOTH)
/		flip L/R (available for perspective view mode)
PAGEUP		change the target object
PAGEDOWN		change the target object
q,Q		quit the program

* rotation step(5 deg as default, 10 deg with shift and 30 deg with option)

```
>% stlview
----- STL Viewer -----
usage: stlview datafile <RET>

datafile : STL data(BINARY/ASCII STL)
-----
Compiled [Apr 11 16:28:41 2018] Edited [Apr 11 16:36:34 2018]
```

Additional information

STL color file supported
(5 bits for each color 0-31)
If no color information is found, the default color(0.5,0.5,0.8) is used.

Related commands

```
stlinfo
stlcat
stlcolor
stlbin
stltrans
stlsm
